Feature Improvements

New in Build 3600 are several improvements in the way some features work.

- The zoom tools have been updated to zoom in and out from where you place your cursor.
- There is now a small measurements box that will display the size of a shape and it updates live as you resize or create items.
- Added the ability to access text edit by right clicking on the item and choosing text edit from the menu.
- Import/Export have been removed and you now access artwork and backdrops by using open/save.
- This build added the ability to merge stitch files and several fonts were updates as well as any bug fixes for reported errors.
- **One of the biggest updates for this version is the ability to blend or fuse together your Total Quilter software with Floriani Embroidery Software FTC-U or Fusion. If you also own either of these programs and they are both installed on the same computer the Total Quilter tools and functions will be available from within the same workspace as the Floriani Software. You can still use your Total Quilter software as a stand alone software but if you do own both this is the first time you can enjoy them together in one action packed workspace.**
